

The Internet of Everything driven by Blockchain

To start mining by simply booting up AI equipment and save around 70% online renewal fee.

What is ioeX ?

Through decentralized peer-to-peer networking, ioeX creates a decentralized, distributed networking that allows each AI equipment to transmit the data without a storage and transmission center. The cost of traffic and storage decreases nearly 70%, and the interactions between technology carriers and network communication become more intuitive and closer to reality; meanwhile, it makes data transmission safer, also protects personal privacy better and widens possible applications, such as housing, life, smart cars, Intellectual robots. General users may gain ioeX coins through sharing bandwidth and storage space of their equipment.

ioeX adds additional values on internet of everything through decentralized networking driven by blockchain, and brings blockchain to our lives.

How ioeX does it ?

ioeX and their members have set up physical/online bootstrap nodes and peer nodes all around the world, all these are linked to form ioeX networking; each equipment has its unique ID, therefore the data will be safely and fairly recorded into ioeX blockchain.

Bootstrap nodes

AI equipment with higher computing power, such as server or high-end PC

Peer node

AI equipment with general computing power, such as Internet TV set-top box, smart speaker and smart router

Rewards

To gain coins by sharing bandwidth and storage space of AI equipment or computers

Safety mechanism

Distributed nodes and crypto ID on both ends

Pool mining

Ensuring blockchain function and increasing miners' gain without causing extra burden

Market size

- There were almost **20 billion** of AI equipment by the end of 2017 and it will continue to grow.
- High-cost Relay Server and OTA Server are replaced by ioeX networking, a new solution for data transmission and online software updates that **saves 70% cost**.
- Output value is around **\$1.8 billion USD** according to current M2M traffic.
- Preliminary market of ioeX networking focused on software updates, ioeX will have its exclusive public chain and keep widen the applications in our lives, such as communication software, distributed storage, and self-media management.

Who is Eligible to Join ?

ioeX connects both ends of enterprises and clients directly, and we welcome everyone to join decentralized networking ecosystem of ioeX to explore Its infinite possibilities!

Solution provider

To provide production scheme with ioeX software to manufacturers

Chip plant

To provide chips and design scheme with ioeX software to solution providers

Equipment supplier

To program ioeX software into equipment during manufacturing

Software company

To provide authorized software with ioeX networking function to chip plants, equipment suppliers or solution providers

General AI equipment user

Only needs to download app with ioeX function

Team

ioeX Team has 15-year experience in developing and integrating AI equipment, 10-year experience in developing highly customized system and we know how to satisfy AI equipment suppliers' needs.
